

The Song Dynasty in China – Online Educational Module

Explore China's iconic and magnificent scroll depicting life in a 12th century Chinese city, digitized and interactive. Painted by an artist living at the time, this scroll provides insights into the most advanced society in the world in 1000 CE – with sophisticated urban life, an agricultural revolution, the introduction of paper money, and technological inventions – including printing, the compass, and gunpowder, a mechanical clock, and the use of coal, which so fascinated Marco Polo in his later visits.
